PRELIMINARY ROUND

BRIEFING SESSION

TIMELINE

TIMELINE

Preliminary Round
25th April – 3rd May

Prototype Building
9th May – 5th June

Registration
16th March – 24th April

Finalist Announcement
9th May

Physical Final Day
6th June

Universiti Malaya

SUBMISSION FORMAT

(PRELIMINARY)

SUBMISSION PERIOD

Opens: 1 May 2026, 12:00 AM

Closes: 3 May 2026, 11:59:59 PM

Channel: Google Form (will be released when submission is open)

Note: No edits after the submission deadline

REQUIRED DELIVERABLES

1. Presentation Slides

- Max 20 slides (excluding cover and thank you slides)
- Any additional slides beyond the limit will not be reviewed.
- PDF

REQUIRED DELIVERABLES

2. Pitching video

- Max 8 minutes
- Any content beyond the 8-minute mark will not be taken into account during judging.
- Presentation style of the video is flexible (e.g., editing, animations, or showing your face is up to participants' decision).
- Excessive speed-up that affects clarity may result in mark deductions, and participants will bear full responsibility for this.
- Upload the video to YouTube as Unlisted
- Insert the YouTube link into the Google Form

IMPORTANT SUBMISSION RULES

1. All work in the final submissions of the presentation slides, and pitching video must be done within the preliminary round submission period, or the team may be disqualified.
2. All references to existing available resources must be cited in the submission materials, or the team may be disqualified.
3. The team leader is liable for submitting materials through the UM Technothon 2026 Official Submission Google Form Link from 12:00:00 am, 1st May 2026, to 11:59:59 pm, 3 May 2026.
4. You may edit your responses after submission via the Google Form, but only before the deadline. We will not accommodate any requests to modify or re-upload links/documents after the deadline.

IMPORTANT SUBMISSION RULES

5. No late submissions will be accepted under any circumstances. Please plan your time accordingly and submit on time.
6. Once submitted, no changes request will be entertained by the organising committee.
7. The organising committee reserves the right to decide on amendments to the judging criteria at the behest of the judging panel.

THEME

INTRODUCTION

THEME INTRODUCTION

**“Smart Energy Management for a
Sustainable Future”**

CASE STATEMENT

REVEAL

FULL CASE STATEMENT

"Massive amounts of electricity are wasted daily in Malaysia due to inefficient energy usage practices in residential and commercial spaces. Lights, air-conditioning, and appliances are often left running unnecessarily, leading to increased operational costs and environmental impact.

As urban development accelerates and energy demand continues to rise, existing approaches to energy management are no longer sufficient. There is a growing need for intelligent, scalable, and user-centric solutions that can optimize energy consumption, reduce waste, and promote sustainable practices across various environments."

FULL CASE STATEMENT

Participants are challenged to design innovative solutions that improve energy efficiency and reduce energy waste. Solutions may include, but are not limited to, automation systems, data-driven optimization, behavioral interventions, or novel business models that encourage sustainable energy usage.

KEY AREAS TO FOCUS

1. Occupancy & Spatial Detection

Examples:
The use of IoT sensors, thermal mapping, or motion detection to identify human presence and space utilization in real time.

2. Automated Power Control

Examples:
Smart switching mechanisms, adaptive control systems, or rule-based automation to manage lighting, appliances, or HVAC systems efficiently.

3. AI Data Analytics & Predictive Optimization

Examples:
Applying machine learning or data analytics techniques to analyze consumption patterns, forecast demand, and optimize energy usage.

KEY AREAS TO FOCUS

4. Hardware-Software Integration

Examples:
Integrated systems that connect physical devices with software platforms for real-time monitoring, control, and decision-making.

5. Cost & Impact Tracking

Examples:
Features that track and visualize energy savings, financial cost reductions, and environmental impact (e.g., carbon footprint) to promote awareness and behavioral change.

6. Scalability & Retrofitting

Examples:
Solutions that are adaptable, cost-effective, and easily deployable within existing infrastructure without requiring extensive modifications.

Disclaimer:

The key areas to focus on that were listed, serve as a general guidance. Participants are encouraged to explore beyond these examples and develop their own innovative, integrated solutions.

JUDGING CRITERIA

JUDGING CRITERIA

1. Innovation & Sustainability (30 %)

- Applicability/Relevance to Context – 10%
- Innovation in Implementation – 10%
- Sustainability – 10%

2. Impact & Feasibility (30%)

- Feasibility and practicability – 10%
- Technical Aspects of Functionalities – 20%

JUDGING CRITERIA

3. User-Centered Design & Ethnics (20%)

- Stakeholder Needs & Inclusivity - 10%
- Urgency & Real-World Relevance - 10%

4. Pitching & Demo (20 %)

- Clarity of Concepts - 10%
- Formatting & Presentation Creativity - 10%
